Chairs - Ian Collier (STFC) / Jos van Wezel (SURFsara)

- Small group discussions
- Interact with the group
- Be critical
- Use this meeting to voice your opinions

- Form group of max 8 persons
- Each group appoints a moderator and rapporteur
- Moderator
 - moderates group discussion
 - keeps time (20' max)
- Rapporteur
 - collects one-line output statements from group discussions
 - presents output to all in this room

Discussions

- concentrate the discussion on the question at hand
- no constraints but we offer some 'guide lines'
- do bring in questions or discussions from the sessions this morning

Vision: What is EOSC for you?

What characteristics of EOSC will make the difference from what infrastructures and providers offer today?

- Ease of access to the infrastructure / service. Admission policies and regulations. Local/Community/International borders and barriers.
- What must an infrastructure offer to enable open science and FAIR data.
- From a community perspective: EOSC will bring scientific progress if we had.....
- From a infrastructure perspective: cooperate, federate

What requirements must EOSC consider when federating different structures?

- Development and application of standards, certifications and regulations across providers
- Compatibility and takeover of services

What criteria should apply before adopting services and thereafter operating quality services?

- Service quality is determined by the provider or the community
- Service based or customer based (at higher costs)
- Community developments are a special case for the community
- Commercial providers
- Should there be regulation and certification of services and should they be enforced and how. Which are the bodies to develop and carry these regulations

What type of services do you see as core for EOSC to take off and be operational?

• What type of services do you see as commodities?

• What services do you see as core service?

• How do you envision these services can be coordinated in EOSC when multiple 'look-a-likes' exists'
